

Security Identifiers	523
Managing ACLs	525
Example: UNIX-Style Permission for NTFS Files	527
Example: Initializing Security Attributes	531
Reading and Changing Security Descriptors	535
Example: Reading File Permissions	537
Example: Changing File Permissions	538
Securing Kernel and Communication Objects	539
Example: Securing a Process and Its Threads	541
Overview of Additional Security Features	542
Summary	544
Exercises	544

APPENDIX A Using the Sample Programs 547

<i>Examples</i> File Organization	548
-----------------------------------	-----

APPENDIX B Source Code Portability: Windows, UNIX, and Linux 549

Source Code Portability Strategies	550
Windows Services for UNIX	550
Source Code Portability for Windows Functionality	551
Chapters 2 and 3: File and Directory Management	556
Chapter 4: Exception Handling	561
Chapter 5: Memory Management, Memory-Mapped Files, and DLLs	562
Chapter 6: Process Management	563
Chapter 7: Threads and Scheduling	565
Chapters 8–10: Thread Synchronization	567
Chapter 11: Interprocess Communication	569
Chapter 14: Asynchronous I/O	571
Chapter 15: Securing Windows Objects	572

APPENDIX C Performance Results 575

Test Configurations 575

Performance Measurements 577

Running the Tests 591

Bibliography 593

Index 597

Figures

3-1	The Registry Editor	87
4-1	SEH, Blocks, and Functions	103
4-2	Exception Handling Sequence	108
5-1	Windows Memory Management Architecture	133
5-2	Memory Management in Multiple Heaps	144
5-3	A File Mapped into Process Address Space	153
5-4	Shared Memory	154
5-5	Sorting with a Memory-Mapped Index File	163
6-1	A Process and Its Threads	183
6-2	Process Handle Tables	189
6-3	File Searching Using Multiple Processes	198
7-1	Threads in a Server Environment	226
7-2	Merge-Sort with Multiple Threads	238
7-3	Thread Local Storage within a Process	245
7-4	Thread States and Transitions	250
7-5	Control Flow among Fibers in a Thread	255
8-1	Unsynchronized Threads Sharing Memory	261
8-2	Memory System Architecture	264
8-3	Synchronized Threads Sharing Memory	272
10-1	Multistage Pipeline	353
11-1	Process-to-Process Communication Using an Anonymous Pipe	381
11-2	Clients and Servers Using Named Pipes	385
11-3	Clients Using a Mailslot to Locate a Server	403
13-1	Controlling Windows Services through the SCM	471

14-1	An Asynchronous File Update Model	488
14-2	Asynchronous I/O with Completion Routines	496
15-1	Constructing a Security Descriptor	521

Tables

3-1	Lock Request Logic	83
3-2	Locks and I/O Operation	84
8-1	Summary of Event Behavior	289
8-2	Comparison of Windows Synchronization Objects	293
9-1	Mutex and CS Performance with Multiple Processors	306
11-1	Named Pipes: Creating, Connecting, and Naming	405
11-2	Mailslots: Creating, Connecting, and Naming	405
13-1	Service Types	458
13-2	Service State Values	459
13-3	Controls That a Service Accepts (Partial List)	459
B-1	Chapters 2 and 3: File and Directory Management	556
B-2	Chapter 4: Exception Handling	561
B-3	Chapter 5: Memory Management, Memory-Mapped Files, and DLLs	562
B-4	Chapter 6: Process Management	563
B-5	Chapter 7: Threads and Scheduling	565
B-6	Chapters 8-10: Thread Synchronization	567
B-7	Chapter 11: Interprocess Communication	569
B-8	Chapter 14: Asynchronous I/O	571
B-9	Chapter 15: Securing Windows Objects	572
C-1	File Copy Performance	580
C-2	File Conversion Performance	582
C-3	Word Counting Performance	584
C-4	Random File Record Access	586
C-5	Locking Performance	588
C-6	Multithreaded Pipeline Performance on a Four-Processor Desktop	590

Programs

1-1	cpC: File Copying with the C Library	13
1-2	cpW: File Copying with Windows, First Implementation	17
1-3	cpCF: File Copying with a Windows Convenience Function	19
2-1	ReportError: Reporting System Call Errors	39
2-2	cat: File Concatenation to Standard Output	41
2-3	cci: File Encryption with Error Reporting	44
2-4	cci_f: File Conversion Function	45
2-5	PrintMsg: Console Prompt and Print Utility Functions	54
2-6	pwd: Printing the Current Directory	55
3-1	RecordAccess: Direct File Access	66
3-2	lsW: File Listing and Directory Traversal	75
3-3	touch: Setting File Times	79
3-4	lsReg: Listing Registry Keys and Contents	92
4-1	ReportException: Exception Reporting Function	112
4-2	toupper: File Processing with Error and Exception Recovery	118
4-3	Exception: Processing Exceptions and Termination	121
4-4	Filter: Exception Filtering	123
4-5	Ctrlc: Signal Handling Program	126
5-1	sortBT: Sorting with a Binary Search Tree	145
5-2	FillTree: Tree Management Functions	147
5-3	cci_fmm: File Conversion with Memory Mapping	157
5-4	sortFL: Sorting a File with Memory Mapping	159
5-5	sortMM: Based Pointers in an Index File	163
5-6	sortMM: Creating the Index File	165
5-7	cciEL: File Conversion with Explicit Linking	173

6-1	grepMP: Parallel Searching	198
6-2	timep: Process Times	203
6-3	JobShell: Create, List, and Kill Background Jobs	206
6-4	JobMgt: Creating New Job Information	209
6-5	JobMgt: Displaying Active Jobs	211
6-6	JobMgt: Getting the Process ID from a Job Number	212
6-7	JobObjectShell: Monitoring Processes with a Job Object	217
7-1	grepMT: Multithreaded Pattern Searching	233
7-2	sortMT: Merge-Sort with Multiple Threads	239
8-1	simplePC: A Simple Producer and Consumer	274
8-2	eventPC: A Signaling Producer and Consumer	290
9-1	statsMX: Maintaining Thread Statistics	303
9-2	statsSRW_VTP: Thread Performance with a Thread Pool	320
10-1	SynchObj.h: Part 1—Threshold Barrier Definitions	345
10-2	ThbObject: Implementing the Threshold Barrier	345
10-3	SynchObj.h: Part 2—Queue Definitions	348
10-4	QueueObj: The Queue Management Functions	349
10-5	ThreeStage: A Multistage Pipeline	354
10-6	QueueObjCV: The Queue Management Functions	363
10-7	QueueObjCancel: Queue Functions Modified for Cancellation	369
11-1	Redirect: Interprocess Communication	381
11-2	clientNP: Named Pipe Connection-Oriented Client	393
11-3	serverNP: Multithreaded Named Pipe Server Program	395
11-4	SrvrBcst: Mailslot Client Thread Function	406
11-5	LocSrver: Mailslot Server	407
12-1	clientSK: Socket-Based Client	424
12-2	serverSK: Socket-Based Server with In-Process Servers	427
12-3	serverSK: Server Thread Code	431
12-4	commandIP: Sample In-Process Servers	435

12-5	SendReceiveSKST: Thread-Safe DLL	438
12-6	SendReceiveSKHA: Thread-Safe DLL with a State Structure	443
13-1	main: The Main Service Entry Point	455
13-2	SimpleService: A Service Wrapper	462
13-3	ServiceShell: A Service Control Program	472
14-1	cciOV: File Conversion with Overlapped I/O	488
14-2	cciEX: File Conversion with Extended I/O	497
14-3	TimeBeep: A Periodic Signal	503
14-4	serverCP: A Server Using a Completion Port	510
15-1	chmodW: Change File Permissions	528
15-2	lsFP: List File Permissions	530
15-3	InitUnSA: Initializing Security Attributes	532
15-4	ReadFilePermissions: Reading Security Attributes	537
15-5	ChangeFilePermissions: Changing Security Attributes	539
15-6	ServerNP: Securing a Named Pipe	540

Program Runs

1-1	cpC: Execution and Test	15
1-2	cpW: Execution and Test	18
1-3	cpCF: Execution and Test, with Timing	20
2-2	cat: Results, with ReportError Output	43
2-3	cci: Caesar Cipher Run and Test	45
2-6	pwd: Determining the Current Directory	56
3-1	RecordAccess: Writing, Reading, and Deleting Records	69
3-2	lsW: Listing Files and Directories	78
3-3	touch: Changing File Time and Creating New Files	79
3-4	lsReg: Listing Registry Keys, Values, and Data	96
4-2	toupper: Converting Text Files to Uppercase	120
4-4	Filter: Exception Filtering	124
4-5	Ctrlc: Interrupting Program Execution from the Console	128
5-2	sortBT: Sorting Small and Large Text Files	148
5-3	cciMM: File Conversion with Memory-Mapped Files	159
5-4	sortFL: Sorting in Memory with File Mapping	161
5-6	sortMM: Sorting Using Based Pointers and Mapping	166
5-7	cciEL: Explicit Linking to a DLL	174
6-1	grepMP: Parallel Searching	200
6-6	JobShell: Managing Multiple Processes	213
6-7	JobObjectShell: Monitoring Processes with a Job Object	216
7-1	grepMT: Multithreaded Pattern Searching	235
7-2a	sortMT: Sorting with Multiple Threads	242
7-2b	sortMT: Sorting with Multiple Threads and a Larger File	243

8-1	simplePC: Periodic Messages, Consumed on Demand	277
8-2	eventPC: Producing and Consuming Messages	292
9-1a	statsXX: Performance with Different Locking Techniques	305
9-1b	statsXX: Comparing SRW and CS Performance	312
9-1c	statsMX: Using a Semaphore Throttle	315
9-2	statsSRW: Using a Thread Pool, Fast and Slow Workers	322
10-2	testTHB: Testing the Threshold Barrier Functions	347
10-5a	ThreeStage[_Sig]: Mutex Broadcast and Signaling	360
10-5b	ThreeStageCS[_Sig]: CS Broadcast and Signaling	361
10-6	ThreeStageCV: Condition Variable and CS Performance	366
11-1	Redirect: Using an Anonymous Pipe	383
11-3	serverNP: Servicing Several Clients	400
11-4	clientNP: Client Commands and Results	401
12-1	clientsSK: Socket Client Operation	425
12-3	serversSK: Requests from Several Clients	433
13-2a	SimpleService: Controlled by sc	466
13-2b	SimpleServiceLog.txt: The Log File	467
13-3	ServiceShell: Managing Services	476
14-1	cciOV: Comparing Performance and Testing Results	491
14-2	cciEX: Overlapped I/O with Completion Routines	499
15-2	chmodW, lsFP: UNIX-like File Permissions	531
